TPCG ARGENTINA DAILY STRATEGY WATCH

Argentina – Strategy

March 23, 2023

Argentina Morning View

- **IN A NUTSHELL:** We take a deep look at why the Government launched a mandatory debt exchange for private entities. We find that the Government is trying to (i) control de BCS, (ii) avoid a devaluation, and (iii) raise ARS to cover the fiscal gap. While the mechanism might help with these three priorities, it comes at a very steep price: a conflict with the IMF, the opposition within the FdT, and the risk of a substantial acceleration in inflation.
- **RATIONALE:** Let me try to recap what happened over the past two days. It started with the leak of a decree never officially signed by the President. It continued with a meeting between the economic team and banks, in which the Government suggested that its initial plans were substantially less ambitious than the broad-sweeping powers granted by the decree. A few hours later, Vice-minister Rubinstein tweeted that the Government was working on building a framework that would allow it to intervene more heavily in the BCS market, on a line closer to the decree than to what had been discussed during the morning meeting with banks. Finally, a decree was published by night. While the Government came and went, bonds tumbled, bounced back, and tumbled again, closing almost 7% below Tuesday's closing.

So, let's trace back to a critical question: what is the Government trying to do? In our view, the Government needs to find a solution for three problems: (i) an unanchored BCS, (ii) a shortage of hard currency following the drought, and (iii) a shortage of ARS financing in a context where private, unregulated creditors balk at maintaining their exposure to Treasury debt. The mechanism that the Government outlined in the decree seems to address all three points. As published, the Government put in place two different facilities. The first, the least interesting of the two, forces public sector entities into swapping their holdings of hard currency, global law (the ARGENTS or the GDs going forward) Argentinian bonds for a newly minted ARS security maturing in 2036 and paying as interest inflation +3% of devaluation +3%, whichever is larger. We estimate that about USD4bn in notional is eligible for this swap, which the Government plans on delisting after the tender. In other words, the Government would reduce the ARGENT curve float by a little less than 10% after the swap.

The second mechanism is, by far, the most interesting (and the more dangerous). The decree forces public sector entities into selling their hard currency, local law Argentina bonds (alternatively, the ARGBONs, BONARs, or ALs). The Treasury will set up actions for the selling of the bonds, and the public entities will be required to use 70% of the proceeds to purchase ARS Treasury paper. The remaining 30% should be allocated to social plans or loans to the more vulnerable (it's an election year, after all). In this context, the second mechanism addresses all three Government priorities. For starters, with about USD10-12bn in notional of AL bonds held by the public sector (excl BCRA), the auctions of dollarized paper would give the Government substantial firepower to keep the BCS market well supplied, minimizing the risk of the parallel FXs gapping in the short run. Second, with the prospect of international reserves taking a severe hit on the back of the drought, the Government needs to supply the market with an alternative to reserves. While ALs could seem like funny money next to reserves, there's probably an exchange ratio (price) at which the private sector would be willing to use these securities as a substitute for hard dollars. This, of course, requires easing FX controls. Currently, most local investors can buy Bonars but can't do much with them after purchasing them. Banks and regulated players have stringent limits on their holdings. Non-regulated players have limits on how much they can trade in a given week and how to sell them after buying them. Selling against USD or transferring to Euroclear would automatically bar the company from accessing the FX market over the following 90 days. The Government started last night unwinding some of these restrictions. Looking forward, we expect the Government to create a myriad of special

regimes that allow the private sector to skirt capital controls by purchasing these ALs from the Treasury. Banks will probably be allowed to exceed the PGME limit if they buy ALs in Government held auctions. Likewise, insurance companies will probably be allowed to hold more dollarized assets. In other words, we expect the Government to offer regulated players a path towards dollarizing their balance sheets if they buy the ALs. For unregulated players, we expect the carrot to be based on selling these bonds in exchange for dollars without losing FX market access. In this context, it would offer a path toward paying dividends and an alternative for speedier import payments if the auction price is right.

This brings us to the third priority. The drop in the rollover ratio and the failure of the ARS swaps put the Government in dire need of ARS financing. The market is unwilling to buy any ARS security (inflation or FX linked) maturing after the election. And increasingly, non-regulated players seem intent on reducing their exposure to the Treasury. Still, the Government is gambling that the private sector would be willing to buy Get Out of Jail Free cards. In our view, the Government will sell a bundle of AL paper and exceptions to the FX controls in these auctions. In other words, the Government finally found something valuable it could sell to the private sector and raise ARS to cover the financing gap: a path to elude the FX controls maze.

Wow, I'm re-reading what I wrote, and I almost make it sound like a sensible play. It's not. For starters, the Government will find itself in hot water with the IMF and the opposition in a context where the second mechanism boils down to issuing hard dollar debt at a YTM in excess of 47.5% (granted, that YTM is only valid if you assume that you'll collect the principal payments). In other words, the Government would be (i) increasing net debt and (ii) increasing the % of the private debt that's dollarized. Both moves should hurt the DSA moving forward, making the negotiation of a new IMF program in 2024 trickier and potentially spilling over the credit problems of the ARS curve to the USD curve. Also, it means that the same Government that a few weeks ago was paying 37c to repurchase debt is now selling bonds back at 25, which is hardly a sound LM. Second, it's likely to create problems within the FdT, in a context where Mr. Massa is gutting Mrs. Kirchner's legacy policy, the FGS, and is very publicly backtracking on Mr. Fernandez's pledge to "take money from speculators and hand it over to pensioners." FdT candidates hoping to get elected in October will now need to face serious flak from the opposition about "the Government ransacking the pension fund to stabilize banks," as an opposition leader was voicing it yesterday.

Still, the biggest danger we see is the weakening of money demand. Hyperinflation is usually defined as a sharp acceleration in money velocity or, what is the same, a collapse in money demand. Given the prospects of devaluation, the BCS premium, inflation expectations, and overall unconstructive outlook for the Argy economy, the only reason why real money balances remain as high as they are is because of capital controls. The controls work as a dam, creating a huge reservoir of ARS trapped behind them. The second mechanism is analogous to creating a hole in the dam to let some water escape the reservoir. The problem is that once the dam's integrity is compromised, there's a high chance that it might come down entirely on the back of the pressure of the water escaping the reservoir. In technical terms, the second mechanism would give the private sector a path to avoid remaining long ARS. If they take it, it could result in deposit growth stalling and real money balances dropping. That would (i) reduce the amount of net new money that banks have to finance the Treasury gap and the BCRA's quasi-fiscal deficit, (ii) result in an unwinding of Leliqs, (iii) reduce the surface from which the Government collects seigniorage and the inflation tax, forcing the Government into seeking higher inflation rates to collect the same resources. In other words, to control the BCS, prevent a devaluation, and finance the ARS gap, the Government seems willing to risk a drop in money demand, which could potentially make inflation rates spiral out of control— #priorities.

Important Disclaimer

The document, and the information, opinions, estimates and recommendations expressed herein, have been prepared by TPCG Valores SAU to provide its customers with general information regarding the date of issue of the report and are subject to changes without prior notice. TPCG Valores SAU is not liable for giving notice of such changes or for updating the contents hereof. The document and its contents do not constitute an offer, invitation or solicitation to purchase or subscribe to any securities or other instruments, or to undertake or divest investments. Neither shall the document nor its contents form the basis of any contract, commitment or decision of any kind.

Investors who have access to the document should be aware that the securities, instruments or investments to which it refers may not be appropriate for them due to their specific investment goals, financial positions or risk profiles, as these have not been taken into account to prepare the report. Therefore, investors should make their own investment decisions considering the said circumstances and obtain such specialized advice as may be necessary.

The contents of the document are based upon information available to the public that has been obtained from sources considered to be reliable. However, such information has not been independently verified by TPCG Valores SAU, and therefore no warranty, either express or implicit, is given regarding its accuracy, integrity or correctness. TPCG Valores SAU accepts no liability of any type for any direct or indirect losses arising from the use of the document or its contents. Investors should note that the past performance of securities or instruments or the historical results of investments do not guarantee future performance. The market prices of securities or instruments or the results of investments could fluctuate against the interests of investors. Investors should be aware that they could even face a loss of their investment.

Transactions in futures, options and securities or high-yield securities can involve high risks and are not appropriate for every investor. Indeed, in the case of some investments, the potential losses may exceed the amount of initial investment and, in such circumstances; investors may be required to pay more money to support those losses. Thus, before undertaking any transaction with these instruments, investors should be aware of their operation, as well as the rights, liabilities and risks implied by the same and the underlying stocks. Investors should also be aware that secondary markets for the said instruments may be limited or even not exist.

TPCG Valores SAU and/or any of its affiliates, as well as their respective directors, executives and employees, may have a position in any of the securities or instruments referred to, directly or indirectly, in the document, or in any other related thereto; they may trade for their own account or for third-party account in those securities, provide consulting or other services to the issuer of the aforementioned securities or instruments or to companies related thereto or to their shareholders, executives or employees, or may have interests or perform transactions in those securities or instruments or related investments before or after the publication of the report, to the extent permitted by the applicable law.

TPCG Valores SAU or any of its affiliates' salespeople, traders and other professionals may provide oral or written market Commentary or trading strategies to its clients that reflect opinions that are contrary to the opinions expressed herein. Furthermore, TPCG Valores SAU, or any of its affiliates' proprietary trading and investing businesses, may make investment decisions that are inconsistent with the recommendations expressed herein.

No part of the document may be (i) copied, photocopied or duplicated by any other form or means (ii) redistributed or (iii) quoted without the prior written consent of TPCG Valores SAU. No part of the report may be copied, conveyed, distributed or furnished to any person or entity in any country (or persons or entities in the same) in which its distribution is prohibited by law. Failure to comply with these restrictions may breach the laws of the relevant jurisdiction.

For U.S. persons only:

This report is a product of TPCG, which is the employer of the research analyst(s) who has prepared the informative report. The research analyst(s) preparing this report is/are resident(s) outside the United States (U.S.) and is/are not associated person(s) of any U.S. regulated broker-dealer and therefore the analyst(s) is/are not subject to supervision by a U.S. broker-dealer and is/are not required to satisfy the regulatory licensing requirements of FINRA or required to otherwise comply with U.S. rules or regulations.

This report is intended for distribution by TPCG only to U.S. Institutional Investors and Major U.S. Institutional Investors, as defined by Rule 15a-6(b)(4) of the U.S. Securities and Exchange Act, 1934 (the Exchange Act) and interpretations thereof by the U.S. Securities and Exchange Commission (SEC), in reliance on Rule 15a 6(a)(2). If the recipient of this report is not a US Institutional Investors nor a Major U.S. Institutional Investor, as specified above, then he should not act upon this report and return it to the sender. Further, this report may not be copied, duplicated and/or transmitted to any U.S. person, which is not a U.S. Institutional Investor, nor a Major U.S. Institutional Investor.

In order to comply with the US regulations, our transactions with US Institutional Investors and Major US Institutional Investors are effected through the US-registered broker-dealer Marco Polo Securities Inc. ("Marco Polo"). Transactions in securities discussed in this report should be effected through Marco Polo or another U.S. registered broker dealer.
